

# Modular venturi tube

The ST-EXTEND is a new, 1 meter long, extension tube from Calectro, developed to both simplify the handling and reduce the costs related to transportation, stock-keeping and installation. The tube is fully compatible with Calectro's other venturi tubes from the VR and ST series and therefore it fits both the UG-3, UG-4, UG-5 and UG-7 series of duct smoke detectors.

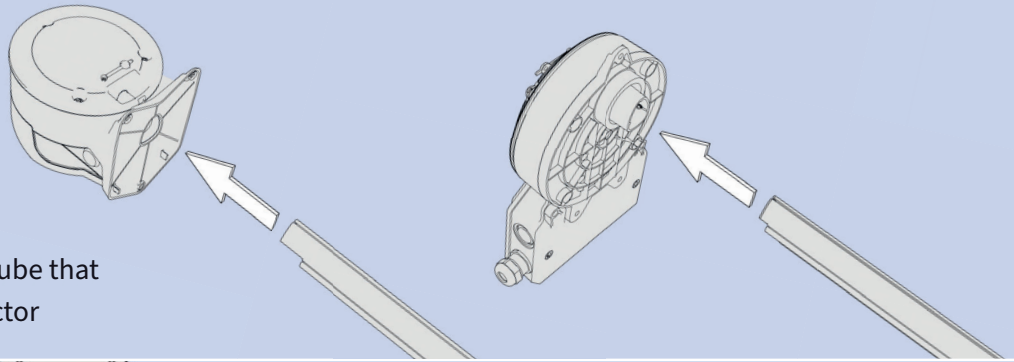

Multiple ST-EXTEND modules can be assembled and can replace both the 1,5 and the 2,8 meters tubes. The modular design eliminates the need for bulky and costly transports and the tubes are easily transported in a service van.

Please turn the page for a short explanation of how the tube is mounted.

# Mount ST-EXTEND in 4 simple steps:

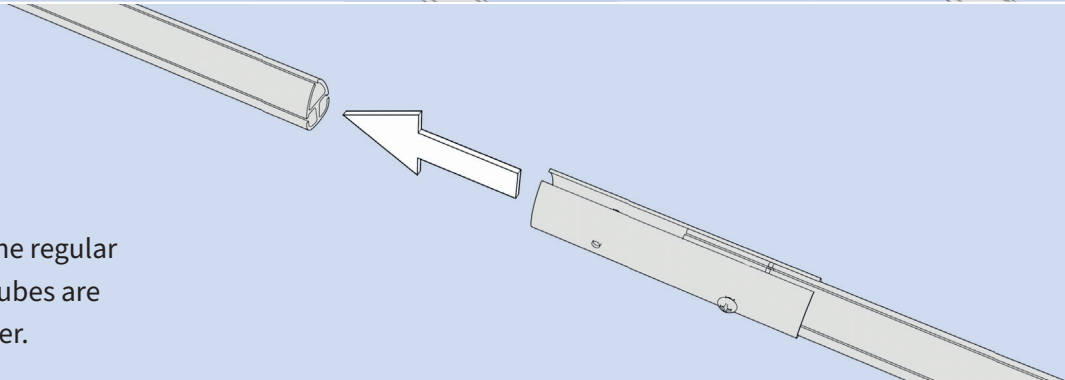

1

Mount the regular venturi tube that belongs to the smoke detector

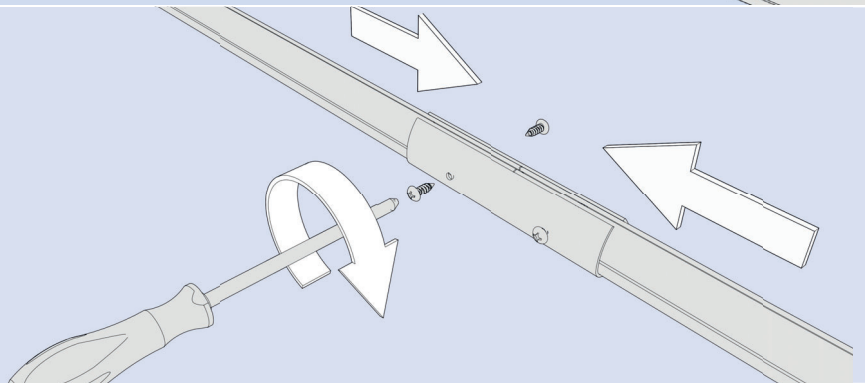

2

Mount the ST-EXTEND to the regular tube and ensure that the tubes are completely pushed together.

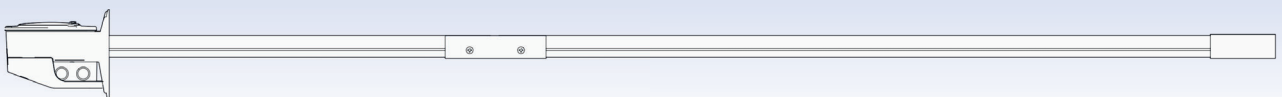

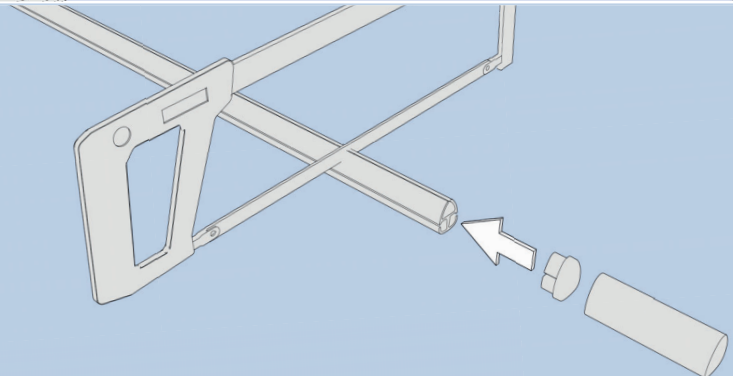

3

Secure the tube by using the two supplied screws.

4

If necessary, cut the ST-EXTEND to required length. Insert the end-plug and put on the plastic end gasket.

Do you want to know more about the ST-EXTEND extension tube and how it can simplify your day? Please contact us or visit our webpage and watch our installation video.

For a complete installation guide of the Uniguard, please see the instruction of each UG-model.
